

# A Summary of TLA<sup>+</sup>

Leslie Lamport

6 Jun 2000

## Module-Level Constructs

———— MODULE  $M$  ————

Begins the module or submodule named  $M$ .

EXTENDS  $M_1, \dots, M_n$

Incorporates the declarations, definitions, assumptions, and theorems from the modules named  $M_1, \dots, M_n$  into the current module.

CONSTANTS  $C_1, \dots, C_n$  <sup>(1)</sup>

Declares the  $C_j$  to be constant parameters (rigid variables). Each  $C_j$  is either an identifier or has the form  $C(\_, \dots, \_)$ , the latter form indicating that  $C$  is an operator with the indicated number of arguments.

VARIABLES  $x_1, \dots, x_n$  <sup>(1)</sup>

Declares the  $x_j$  to be variables (parameters that are flexible variables).

ASSUME  $P$

Asserts  $P$  as an assumption.

$F(x_1, \dots, x_n) \triangleq \text{exp}$

Defines  $F$  to be the operator such that  $F(e_1, \dots, e_n)$  equals  $\text{exp}$  with each identifier  $x_k$  replaced by  $e_k$ . (For  $n = 0$ , it is written  $F \triangleq \text{exp}$ .)

$f[x \in S] \triangleq \text{exp}$  <sup>(2)</sup>

Defines  $f$  to be the function with domain  $S$  such that  $f[x] = \text{exp}$  for all  $x$  in  $S$ . (The symbol  $f$  may occur in  $\text{exp}$ , allowing a recursive definition.)

---

(1) The terminal s in the keyword is optional.

(2)  $x \in S$  may be replaced by a comma-separated list of items  $v \in S$ , where  $v$  is either a comma-separated list or a tuple of identifiers.

INSTANCE  $M$  WITH  $p_1 \leftarrow e_1, \dots, p_m \leftarrow e_m$

For each defined operator  $F$  of module  $M$ , this defines  $F$  to be the operator whose definition is obtained from the definition of  $F$  in  $M$  by replacing each declared constant or variable  $p_j$  of  $M$  with  $e_j$ . (If  $m = 0$ , the WITH is omitted.)

$N(x_1, \dots, x_n) \triangleq$  INSTANCE  $M$  WITH  $p_1 \leftarrow e_1, \dots, p_m \leftarrow e_m$

For each defined operator  $F$  of module  $M$ , this defines  $N(d_1, \dots, d_n)!F$  to be the operator whose definition is obtained from the definition of  $F$  by replacing each declared constant or variable  $p_j$  of  $M$  with  $e_j$ , and then replacing each identifier  $x_k$  with  $d_k$ . (If  $m = 0$ , the WITH is omitted.)

THEOREM  $P$

Asserts that  $P$  can be proved from the definitions and assumptions of the current module.

LOCAL  $def$

Makes the definition(s) of  $def$  (which may be a definition or an INSTANCE statement) local to the current module, thereby not obtained when extending or instantiating the module.

---

Ends the current module or submodule.

## The Constant Operators

### Logic

$\wedge \vee \neg \Rightarrow \equiv$   
 TRUE FALSE BOOLEAN [the set  $\{\text{TRUE}, \text{FALSE}\}$ ]  
 $\forall x : p \quad \exists x : p \quad \forall x \in S : p \quad^{(1)} \quad \exists x \in S : p \quad^{(1)}$   
 CHOOSE  $x : p$  [An  $x$  satisfying  $p$ ] CHOOSE  $x \in S : p$  [An  $x$  in  $S$  satisfying  $p$ ]

### Sets

$= \neq \in \notin \cup \cap \subseteq \setminus$  [set difference]  
 $\{e_1, \dots, e_n\}$  [Set consisting of elements  $e_i$ ]  
 $\{x \in S : p\} \quad^{(2)}$  [Set of elements  $x$  in  $S$  satisfying  $p$ ]  
 $\{e : x \in S\} \quad^{(1)}$  [Set of elements  $e$  such that  $x$  in  $S$ ]  
 SUBSET  $S$  [Set of subsets of  $S$ ]  
 UNION  $S$  [Union of all elements of  $S$ ]

### Functions

$f[e]$  [Function application]  
 DOMAIN  $f$  [Domain of function  $f$ ]  
 $[x \in S \mapsto e] \quad^{(1)}$  [Function  $f$  such that  $f[x] = e$  for  $x \in S$ ]  
 $[S \rightarrow T]$  [Set of functions  $f$  with  $f[x] \in T$  for  $x \in S$ ]  
 $[f \text{ EXCEPT } ![e_1] = e_2] \quad^{(3)}$  [Function  $\hat{f}$  equal to  $f$  except  $\hat{f}[e_1] = e_2$ . An @ in  $e_2$  equals  $f[e_1]$ .]

### Records

$e.h$  [The  $h$ -component of record  $e$ ]  
 $[h_1 \mapsto e_1, \dots, h_n \mapsto e_n]$  [The record whose  $h_i$  component is  $e_i$ ]  
 $[h_1 : S_1, \dots, h_n : S_n]$  [Set of all records with  $h_i$  component in  $S_i$ ]  
 $[r \text{ EXCEPT } !.h = e] \quad^{(3)}$  [Record  $\hat{r}$  equal to  $r$  except  $\hat{r}.h = e$ . An @ in  $e$  equals  $r.h$ .]

### Tuples

$e[i]$  [The  $i^{\text{th}}$  component of tuple  $e$ ]  
 $\langle e_1, \dots, e_n \rangle$  [The  $n$ -tuple whose  $i^{\text{th}}$  component is  $e_i$ ]  
 $S_1 \times \dots \times S_n$  [The set of all  $n$ -tuples with  $i^{\text{th}}$  component in  $S_i$ ]

### Strings and Numbers

$\text{"c}_1 \dots \text{c}_n\text{"}$  [A literal string of  $n$  characters]  
 STRING [The set of all strings]  
 $d_1 \dots d_n \quad d_1 \dots d_n . d_{n+1} \dots d_m$  [Numbers (where the  $d_i$  are digits)]

- 
- (1)  $x \in S$  may be replaced by a comma-separated list of items  $v \in S$ , where  $v$  is either a comma-separated list or a tuple of identifiers.  
 (2)  $x$  may be an identifier or tuple of identifiers.  
 (3)  $![e_1]$  or  $!.h$  may be replaced by a comma separated list of items  $!a_1 \dots a_n$ , where each  $a_i$  is  $[e_i]$  or  $.h_i$ .

### Miscellaneous Constructs

IF $p$ THEN $e_1$ ELSE $e_2$	$[e_1 \text{ if } p \text{ true, else } e_2]$
CASE $p_1 \rightarrow e_1 \square \dots \square p_n \rightarrow e_n$	$[\text{Some } e_i \text{ such that } p_i \text{ true}]$
CASE $p_1 \rightarrow e_1 \square \dots \square p_n \rightarrow e_n \square \text{OTHER} \rightarrow e$	$[\text{Some } e_i \text{ such that } p_i \text{ true, or } e \text{ if all } p_i \text{ are false}]$
LET $d_1 \triangleq e_1 \dots d_n \triangleq e_n$ IN $e$	$[e \text{ in the context of the definitions}]$
$\wedge p_1$	$[\text{the conjunction } p_1 \wedge \dots \wedge p_n]$
$\vdots$	$\vdots$
$\wedge p_n$	$\vee p_1$ $[\text{the disjunction } p_1 \vee \dots \vee p_n]$

### The Action Operators

$e'$	$[\text{The value of } e \text{ in the final state of a step}]$
$[A]_e$	$[A \vee (e' = e)]$
$\langle A \rangle_e$	$[A \wedge (e' \neq e)]$
ENABLED $A$	$[\text{An } A \text{ step is possible}]$
UNCHANGED $e$	$[e' = e]$
$A \cdot B$	$[\text{Composition of actions}]$

### The Temporal Operators

$\square F$	$[F \text{ is always true}]$
$\diamond F$	$[F \text{ is eventually true}]$
$\text{WF}_e(A)$	$[\text{Weak fairness for action } A]$
$\text{SF}_e(A)$	$[\text{Strong fairness for action } A]$
$F \leadsto G$	$[F \text{ leads to } G]$
$F \triangleleft\triangleright G$	$[F \text{ guarantees } G \text{ (an assumption/guarantee specification)}]$
$\exists x : F$	$[\text{Temporal existential quantification (hiding).}]$
$\forall x : F$	$[\text{Temporal universal quantification.}]$

## User-Definable Operator Symbols

### Infix Operators

$+$ <sup>(1)</sup>	$-$ <sup>(1)</sup>	$*$ <sup>(1)</sup>	$/$ <sup>(2)</sup>	$\circ$ <sup>(3)</sup>	$++$
$\div$ <sup>(1)</sup>	$\%$ <sup>(1)</sup>	$\wedge$ <sup>(1,4)</sup>	$\dots$ <sup>(1)</sup>	$\dots$	$--$
$\oplus$ <sup>(5)</sup>	$\ominus$ <sup>(5)</sup>	$\otimes$	$\oslash$	$\odot$	$**$
$<$ <sup>(1)</sup>	$>$ <sup>(1)</sup>	$\leq$ <sup>(1)</sup>	$\geq$ <sup>(1)</sup>	$\sqcap$	$//$
$\prec$	$\succ$	$\preceq$	$\succeq$	$\sqcup$	$\sim\sim$
$\ll$	$\gg$	$<:$	$:>$ <sup>(6)</sup>	$\&$	$\&\&$
$\sqsubset$	$\sqsupset$	$\sqsubseteq$ <sup>(5)</sup>	$\sqsupseteq$	$ $	$  $
$\subset$	$\supset$	$\subseteq$	$\supseteq$	$\star$	$\%\%$
$\vdash$	$\dashv$	$\Vdash$	$\Vdash$	$\bullet$	$\#\#$
$\sim$	$\approx$	$\cong$	$\Re$	$\$$	$\$\$$
$:=$	$::=$	$\succ$	$\dot{=}$	$?$	$??$
$\propto$	$\wr$	$\oplus$	$\bigcirc$	$!!$	$@@$ <sup>(6)</sup>

### Postfix Operators <sup>(7)</sup>

$\wedge+$     $\wedge*$     $\wedge\#$

### Prefix Operator

$-$  <sup>(8)</sup>

- 
- (1) Defined by the *Naturals*, *Integers*, and *Reals* modules.  
(2) Defined by the *Reals* module.  
(3) Defined by the *Sequences* module.  
(4)  $x\wedge y$  is printed as  $x^y$ .  
(5) Defined by the *Bags* module.  
(6) Defined by the *TLC* module.  
(7)  $e\wedge+$  is printed as  $e^+$ , and similarly for  $\wedge*$  and  $\wedge\#$ .  
(8) Defined by the *Integers* and *Reals* modules.

## ASCII Representations of Symbols

$\wedge$	<code>\w</code> or <code>\land</code>	$\vee$	<code>\v</code> or <code>\lor</code>	$\Rightarrow$	<code>=&gt;</code>
$\neg$	<code>\~</code> or <code>\lnot</code> or <code>\neg</code>	$\equiv$	<code>&lt;=&gt;</code> or <code>\equiv</code>	$\triangle$	<code>==</code>
$\in$	<code>\in</code>	$\neq$	<code>\#</code> or <code>\neq</code>	$'$	<code>,</code>
$\langle$	<code>&lt;&lt;</code>	$\rangle$	<code>&gt;&gt;</code>	$\square$	<code>[]</code>
$<$	<code>&lt;</code>	$>$	<code>&gt;</code>	$\diamond$	<code>&lt;&gt;</code>
$\leq$	<code>\leq</code> or <code>=&lt;</code>	$\geq$	<code>\geq</code> or <code>&gt;=</code>	$\sim$	<code>~&gt;</code>
$\ll$	<code>\ll</code>	$\gg$	<code>\gg</code>	$\pm$	<code>-+-&gt;</code>

$\models$	<code>\models</code>	$\vDash$	<code>\vDash</code>	$\asymp$	<code>\asymp</code>
$\rightarrow$	<code>-&gt;</code>	$\leftarrow$	<code>&lt;-</code>	$\approx$	<code>\approx</code>
$\cap$	<code>\cap</code> or <code>\intersect</code>	$\cup$	<code>\cup</code> or <code>\union</code>	$\cong$	<code>\cong</code>
$\sqcap$	<code>\sqcap</code>	$\sqcup$	<code>\sqcup</code>	$\doteq$	<code>\doteq</code>
$\oplus$	<code>(+)</code> or <code>\oplus</code>	$\uplus$	<code>\uplus</code>	$\propto$	<code>\propto</code>
$\ominus$	<code>(-)</code> or <code>\ominus</code>	$\times$	<code>\X</code> or <code>\times</code>	$x^y$	<code>x^y</code> <sup>(2)</sup>
$\odot$	<code>(.)</code> or <code>\odot</code>	$\cdot$	<code>\cdot</code>	$x^+$	<code>x^+</code> <sup>(2)</sup>
$\otimes$	<code>(\X)</code> or <code>\otimes</code>	$\circ$	<code>\o</code> or <code>\circ</code>	$x^*$	<code>x^*</code> <sup>(2)</sup>
$\oslash$	<code>(/)</code> or <code>\oslash</code>	$\text{"s"}$	<code>"s"</code> <sup>(1)</sup>	$x^\#$	<code>x^\#</code> <sup>(2)</sup>
$\exists$	<code>\E</code>	$\forall$	<code>\A</code>		
$\exists$	<code>\EE</code>	$\forall$	<code>\AA</code>		
$\overline{\hspace{1cm}}$	<code>-----</code> <sup>(3)</sup>	$\overline{\hspace{1cm}}$	<code>-----</code> <sup>(3)</sup>		
$\underline{\hspace{1cm}}$	<code>-----</code> <sup>(3)</sup>	$\underline{\hspace{1cm}}$	<code>=====</code> <sup>(3)</sup>		

(1)  $s$  is a sequence of characters. See Section ?? on page ??.

(2)  $x$  and  $y$  are any expressions.

(3) a sequence of four or more - or = characters.

## The Most Common Standard Modules

**Modules** *Naturals, Integers, Reals*

**Define**  $\begin{array}{ccccccc} + & - & * & / & ^ & .. & Nat \\ \div & \% & \leq & \geq & < & > & Int \end{array}$  *Real*  
*Infinity*

Prefix  $-$  is not defined in *Naturals*.

$a^b$  denotes  $a^b$ .

*Nat*, *Int*, and *Real* are the sets of naturals, integers, and real numbers.

$a .. b$  equals  $\{n \in Int : a \leq n \leq b\}$ .

$a \% b$  equals  $a \bmod b$ , defined so  $0 \leq a \% b < b$ , if  $b$  is a positive integer.

$\div$  is defined so  $a = b * (a \div b) + (a \% b)$  for  $a$  and  $b$  integers with  $b > 0$ .

$/$  (division) is defined only in *Reals*.

*Infinity* is defined in *Reals* so  $-Infinity < r < Infinity$  for all  $r \in Real$ .

**Module** *Sequences*

**Defines**  $\begin{array}{cccc} \circ & Head & SelectSeq & SubSeq \\ Append & Len & Seq & Tail \end{array}$

The tuple/sequence  $\langle e_1, \dots, e_n \rangle$  equals the function  $[i \in 1 .. n \mapsto e_i]$ .

$s \circ t$  is the concatenation of sequences  $s$  and  $t$ .

$Append(\langle e_1, \dots, e_n \rangle, e_{n+1}) = \langle e_1, \dots, e_{n+1} \rangle$

$Head(\langle e_1, \dots, e_n \rangle) = e_1$

$Tail(\langle e_1, \dots, e_n \rangle) = \langle e_2, \dots, e_n \rangle$

$Len(\langle e_1, \dots, e_n \rangle) = n$

$Seq(S)$  is the set of all finite sequences of elements of  $S$ .

$SubSeq(\langle e_1, \dots, e_n \rangle, j, k) = \langle e_j, \dots, e_k \rangle$

$SelectSeq(s, Test)$  is the subsequence of elements  $e$  of  $s$  satisfying  $Test(e)$ .

**Module** *FiniteSets*

**Defines** *IsFiniteSet* *Cardinality*

$IsFiniteSet(S)$  is true iff  $S$  is a finite set.

$Cardinality(S)$  is the number of elements in  $S$ , if  $S$  is a finite set.
